

mufin for iTunes

Quick Guide

www.mufin.com

1. About

Thanks for downloading mufin for iTunes! Now you can easily create playlists and rediscover your own music collection.

Mufin analyzes each iTunes track in your music collection based on 40 different sound metrics such as rhythm, tempo and instrumentation. If a track sounds similar to the songs you selected, mufin will automatically include it in a playlist .

2. System requirements

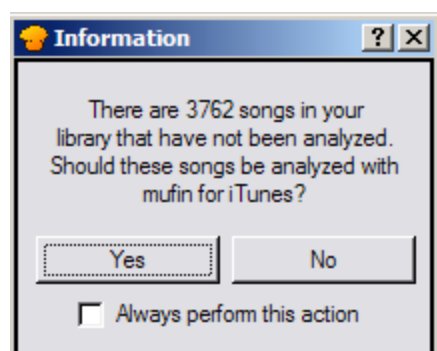

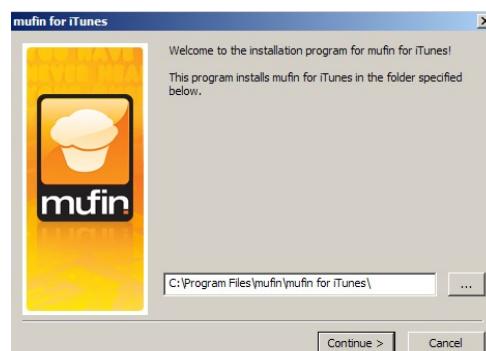

Mufin for iTunes is compatible with Windows XP / Vista (Windows version) or Mac OS X 10.4 or later with Intel processor (Mac version). Mufin requires Apple iTunes Version 8 or later, and supports MP3, AIFF and WAV file formats. AAC and Apple Lossless files are supported only on Macs.

Mufin for iTunes does not support music protected by digital rights management, such as Apple's FairPlay. To get more information on Digital Rights Management, please visit http://en.wikipedia.org/wiki/Digital_rights_management

3. Installation

Windows

To install mufin for iTunes on your system, you have to run the downloaded file by double-clicking it. Now all you need to do is to specify a folder where you want mufin for iTunes to be installed. After successful installation, mufin for iTunes will automatically launch when you start iTunes.

Mac

After downloading, mount mufinforitunes.dmg and run the included installer.

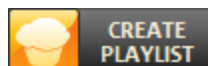

First launch

When you start mufin for iTunes for the first time, it will analyze the sound of your music collection. The analysis takes from 3 to 5 seconds per song. You can use iTunes normally while mufin is analyzing your music library.

The progress of the sound analysis is shown at the left bottom of the mufin for iTunes application. Left-clicking on the arrow toggles between track details and status details. Right-clicking on the arrow pauses / resumes the sound analysis. In the Mac version, analysis may be started and paused in the mufin menu (next to the iTunes help menu).

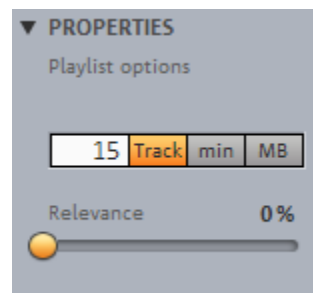

4. Creating playlists

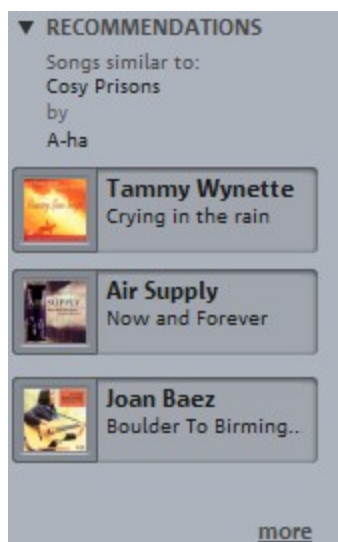

Creating playlists with mufin for iTunes is as easy as it gets: Select a track from your iTunes music library and click "Create Playlist". Mufin for iTunes built a playlist with tracks similar to the one you selected. Mufin for iTunes will take all tracks from your music collection into account when building the playlist - even self-produced tracks, or tracks with missing artist or song titles.

You can customize the duration or size of the playlist under "Settings", e.g., if you want to create a mix and burn it to CD. By tweaking the relevance slider, you can adjust just how similar the tracks in a playlist should be. All playlists created with mufin for iTunes will appear in your iTunes playlists folder.

5. Discover New Music

Mufin for iTunes lets rediscover your music collection and find completely new music as well.

While playing a track in iTunes, similar-sounding tracks will directly show up under "recommendations".

Since mufin for iTunes is sound-based, genre or popularity don't play a role for mufin. Only the sound decides if a track is recommended or not, giving you much greater diversity in discovering music. You want to discover more music? Simply click on "more" and you'll get even more recommendations of similar music at mufin.com.
